summarizing the generation of renewal: carlos magno was able to offer the without culture and, I could say, almost completely without illumination territory of the kingdom that God entrusted to him, a new entoiasm for all human knowledge. in his previous state of barbarism, his kingdom had hardly been touched by any zeal, but now opened his eyes to God's enlightenment. in our own time the thirst for knowledge is disappearing again: the light of wisdom is increasingly less sought and is now becoming rare again in most minds of men. [26] academic efforts also see: tiny Carolingian and medieval Latin the lack of Latin literacy in western europe of the viii century caused problems for Carolingian rulers severely limiting the number of people able to serve as court scribes in societies where Latin was valued. of greater concern for some rulers was the fact that not all parish priests possessed the ability to read the Vulcan Bible. an additional problem was that the vulgar Latin of the Western Roman Empire had begun to turn to the regional dialects, the precursors of the Roman languages of today, which were becoming mutually intelligible and preventing scholars from one part of Europe from communicating with people from another part of Europe. alcuin (picture center) was one of the leading scholars of the Carolingian Renaissance. to address these problems, Carlos Magnus ordered the creation of schools in a capitularity known as the letter of modern thought, issued in 787.[27] an important part of his reform program was to attract many of the leading scholars of the Christendom of his day to his court. among the first called to the court were the Italians: pedro de Pisa, which from 776 tofrom 790 he instructed Charlemagne in Latin, and from 776 to 787 Paulinus of Aquileia, to whomappointed as Patriarch of Aquileia in 787. The Lombard Paul, the deacon, was brought to the court in 782 and remained until 787, when Charles appointed him Abbot of Montecassino. Teodulf de Orléans was a Spanish Goth that served in the court from 782 to 797 when appointed bishop of Orléans. Theodolf was in friendly competition about the standardization of the Vulgate with the chief among the scholars of Charles Magnus, Alcuin of York. Alcuin was a Norwegian monk and deacon who served as head of the Palace School from 782 to 796, except in the years 790 to 793 when he returned to England. After 796, he continued his academic work as Abbot of the Monastery of St. Martin in Tours. [23] Among those who followed Alcuin throughout the channel until the Frankish court was Joseph Scottus, an Irishman who left some original biblical comments and acrostic experiments. After this first generation of non-Frankish scholars, their Frankish students, such as Angilbert, would make their own brand. The later courts of Louis, Pius and Charles, the Bald, had similar groups of scholars many of whom were of Irish origin. The Irish monk Dicuil attended the former court, and the most famous Irishman John Scotus Eriugena attended the latter becoming head of the Palace School in Aachen. One of the primary efforts was to create a standardized curriculum for use in newly created schools. Alcuin led this effort and was responsible for writing textbooks, creating word lists and establishing the trivium and quadrivium as the basis for education. [28] Another contribution of this period was the development of the tiny carolingia, a "book hand" used for the first time in the monasteries of Corbie and Tours that introduced the use of tiny letters. A standardized version of Latin was also developed that allowed the coinage of new words, keeping the grammar rules of classical Latin. This medieval Latin became acommon common common common
